Aluminum
A pink to red color will form when aluminum reacts with Eriochrome Cyanine R at pH 6.

Bacteria
LaMotte offers the BART™ (Biological Activity Reaction Tests) line of kits for various microbiological analyses. Results are obtained by observation after 2-8 days of room temperature incubation. Please contact us for more information. (see also Coliform)

Chloride
The argentometric method employs a chromate indicator and silver nitrate titrant. Hydrogen peroxide is included to eliminate sulfite interference.

Chlorine
Free, combined, and total chlorine may be determined using DPD with either colorimetric or titrimetric methods. These determinations are generally limited to concentrations of 0–10 ppm, although the FAS titration can test higher concentrations with the addition of more DPD indicator.

**Legionella Field Test Kit**

**Order Code 7-2100**

The Legionella Field Test uses Lateral Flow Immunochromatographic Assay [LFICA] technology to detect the presence of cell surface antigens from Legionella bacteria. It uses Legionella antibodies, tagged with red nanoparticles, which bind to any bacteria found in the sample and make them visible on a line on the device. The test works just like a pregnancy test - one line indicates a negative result and two lines indicate a positive result.

This kit is designed to test for Legionella in risk areas identified by the CDC (Centers for Disease Control and Prevention) such as:

- Domestic and industrial hot and cold water systems
- Pools, hot tubs and decorative fountains
- Cooling towers
- Sinks and showers
- Misters, sprinklers, air washers, humidifiers and others

**Rapid Test! In Just 25 Minutes!**

The kit contains all the items required to perform 1 test

- The test detects *Legionella pneumophila* serogroup 1 (LpSG1).
- With filtration step, the sensitivity of the water test is 100 CFU/L.
- The test detects Viable-But-Non-Culturable Bacteria and Legionella SG1 in all stages of its life-cycle.
- No need to measure or dilute solutions.
- Provides straightforward results, on-site, within 25–35 minutes.
- The test is simple to use, no interpretation is required.
- Minimizes delays and downtime.
- Regular use increases confidence in Legionella controls.
- The smartphone App reader provides independent record of results (Download FREE App from the App store).
